Temas en gráficos

- theme_grey()
- theme_gray()
- theme_bw()
- theme_linedraw()
- theme_dark()
- theme_light()
- theme_minimal()

```
ggplot(data = defun_w) +  
  geom_boxplot(aes("", y1990)) +  
  theme_light()
```

```
ggplot(data = defun_w) +  
  geom_boxplot(aes(x = "", y1990), colour = "dodgerblue4", fill = "dodgerblue1")
```

```
ggplot(data = defun_w) +  
  geom_boxplot(aes(x = "", y1990), colour = "dodgerblue4", fill = "dodgerblue1") +  
  geom_boxplot(aes(x = "", y1991), colour = "#548B54", fill = "#98FB98")
```

```
ggplot(data = defun_w) +  
  geom_boxplot(aes(x = "1990", y1990), colour = "dodgerblue4", fill = "dodgerblue1") +  
  geom_boxplot(aes(x = "1991", y1991), colour = "#548B54", fill = "#98FB98")
```

Estructura de datos en {ggplot2}

- La graficación es más eficiente con datos estructurados en formato “**long**”, es decir, una columna para cada variable y una fila para cada observación.
- La correcta estructura de los datos le ahorrará mucho tiempo al generar gráficos con **ggplot2**.
- Los gráficos de ggplot se construyen agregando capa por capa (geometrías u otros elementos).
- La graficación por capas otorga una flexibilidad y personalización de los gráficos.

```
ggplot(data = defun_l) +  
  geom_boxplot(aes(year, tot_def)) +  
  theme_bw()
```

```
ggplot(data = defun_l) +  
  geom_boxplot(aes(year, tot_def), colour = "dodgerblue4", fill = "dodgerblue1") +  
  theme_bw()
```

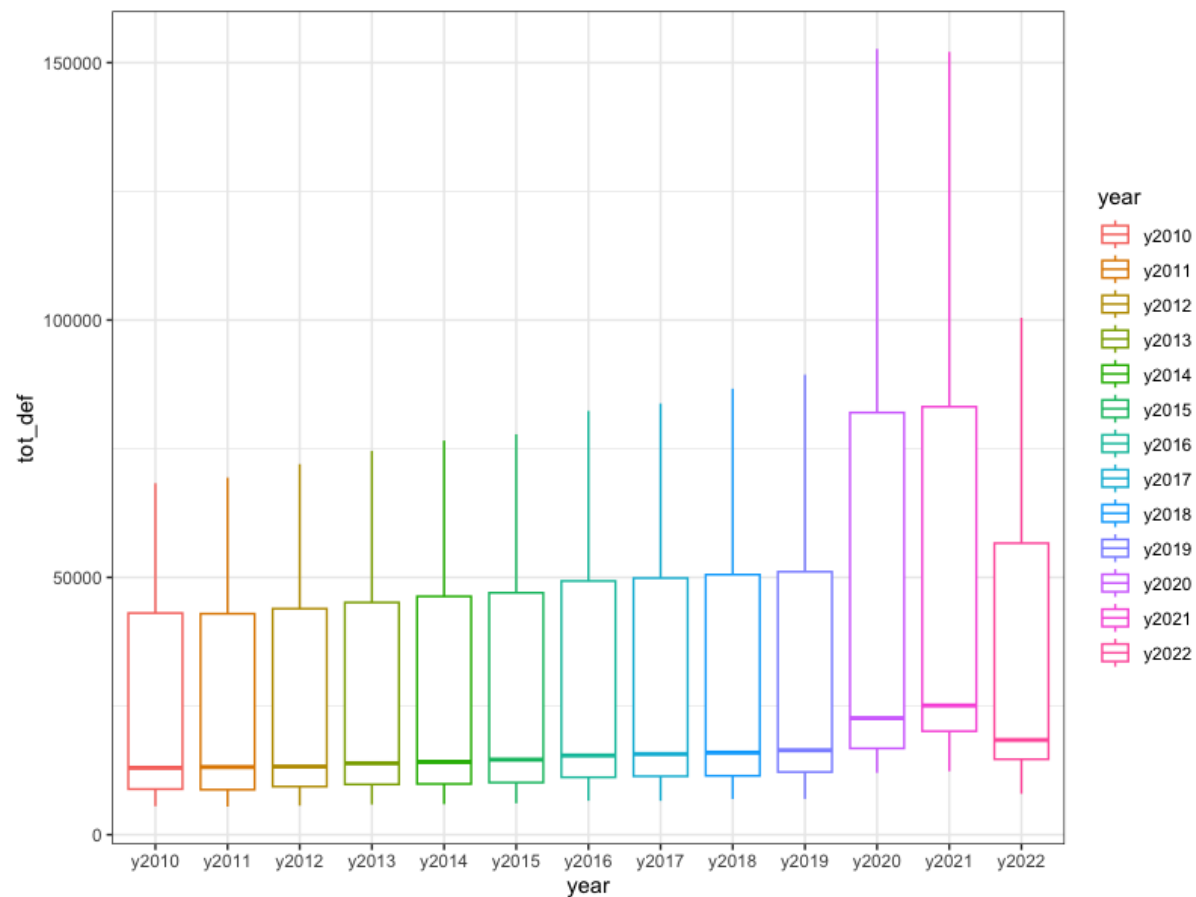

Argumentos "color" y "fill"

- color: define el color de un borde.
- fill: define el color de relleno.
- Dentro de "aes" aplican un color distinto a cada elemento a graficar.
- Fuera de "aes" aplican a todos los elementos a graficar.

```
ggplot(data = defun_l) +  
  geom_boxplot(aes(year, tot_def, color = year)) +  
  theme_bw()
```

```
ggplot(data = defun_l) +  
  geom_boxplot(aes(year, tot_def, color = year, fill = year)) +  
  theme_bw()
```

```
ggplot(data = defun_l) +  
  geom_boxplot(aes(year, tot_def, fill = year), color = "skyblue4") +  
  theme_bw() +  
  theme(legend.position = "none")
```

```
defun_l %>%  
  filter(!cve_edo %in% c("09", "15")) %>%  
  ggplot( )+  
  geom_line(aes(year_num, tot_def)) +  
  theme_bw()
```

- No es necesario tener la malla como un objeto para graficar.
- Los datos a graficar pueden venir de un preproceso de datos y terminar con el gráfico.

```
defun_l %>%
```

```
  filter(!cve_edo %in% c("09", "15")) %>%
```

```
  ggplot( )+
```

```
  geom_line(aes(year_num, tot_def, color = estado)) +
```

```
  theme_bw()
```

```
ggplot(defun_l)+  
  geom_line(aes(year_num, tot_def, color = estado)) +  
  theme_bw()
```

```
ggplot(defun_l)+  
  geom_line(aes(year, tot_def, color = estado, group = estado)) +  
  theme_bw()
```

```
ggplot(defun_l) +  
  geom_histogram(aes(tot_def)) +  
  theme_bw()
```

```
ggplot(defun_l) +  
  geom_histogram(aes(tot_def), color = "red", fill = alpha("red", 0.3), bins = 10) +  
  theme_bw()
```

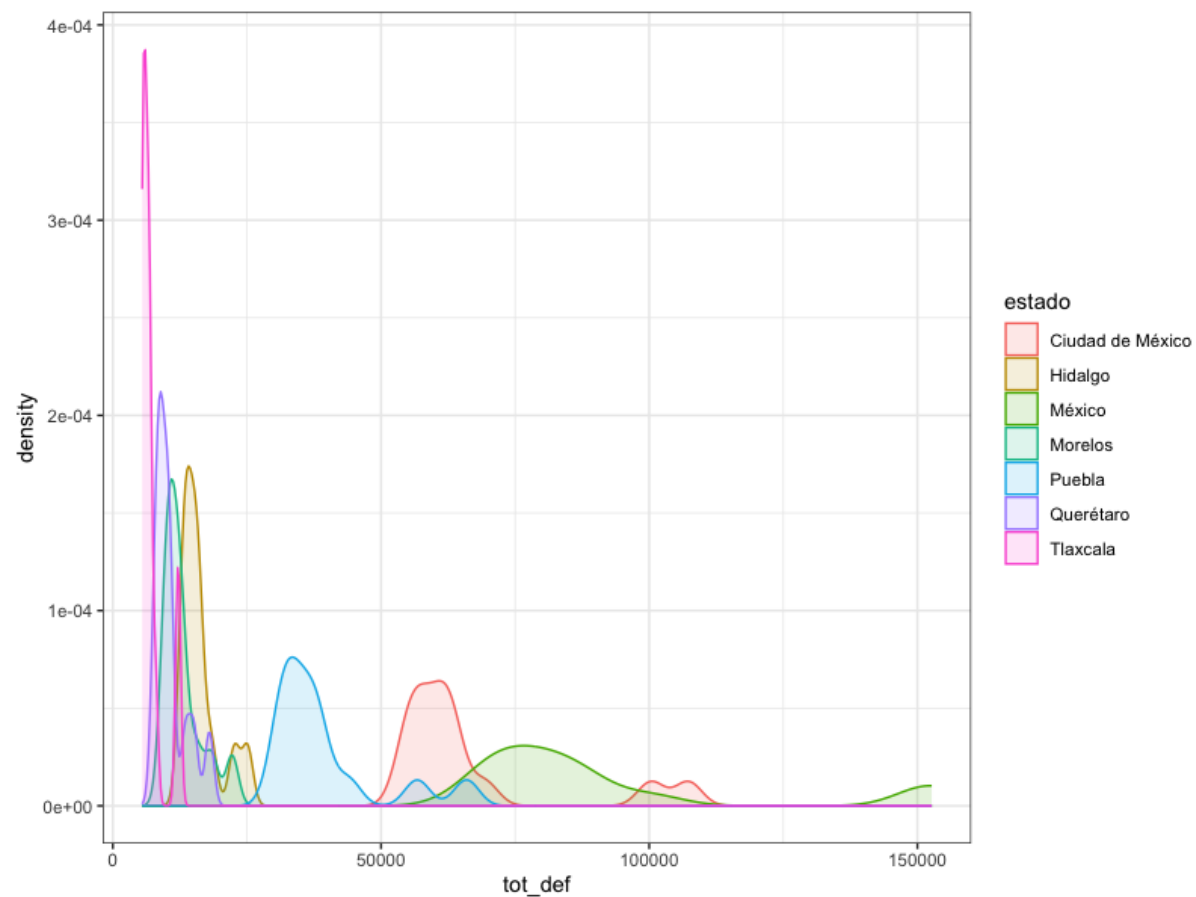

```
ggplot(defun_l) +  
  geom_density(aes(tot_def), color = "red", fill = alpha("red", 0.3)) +  
  theme_bw()
```

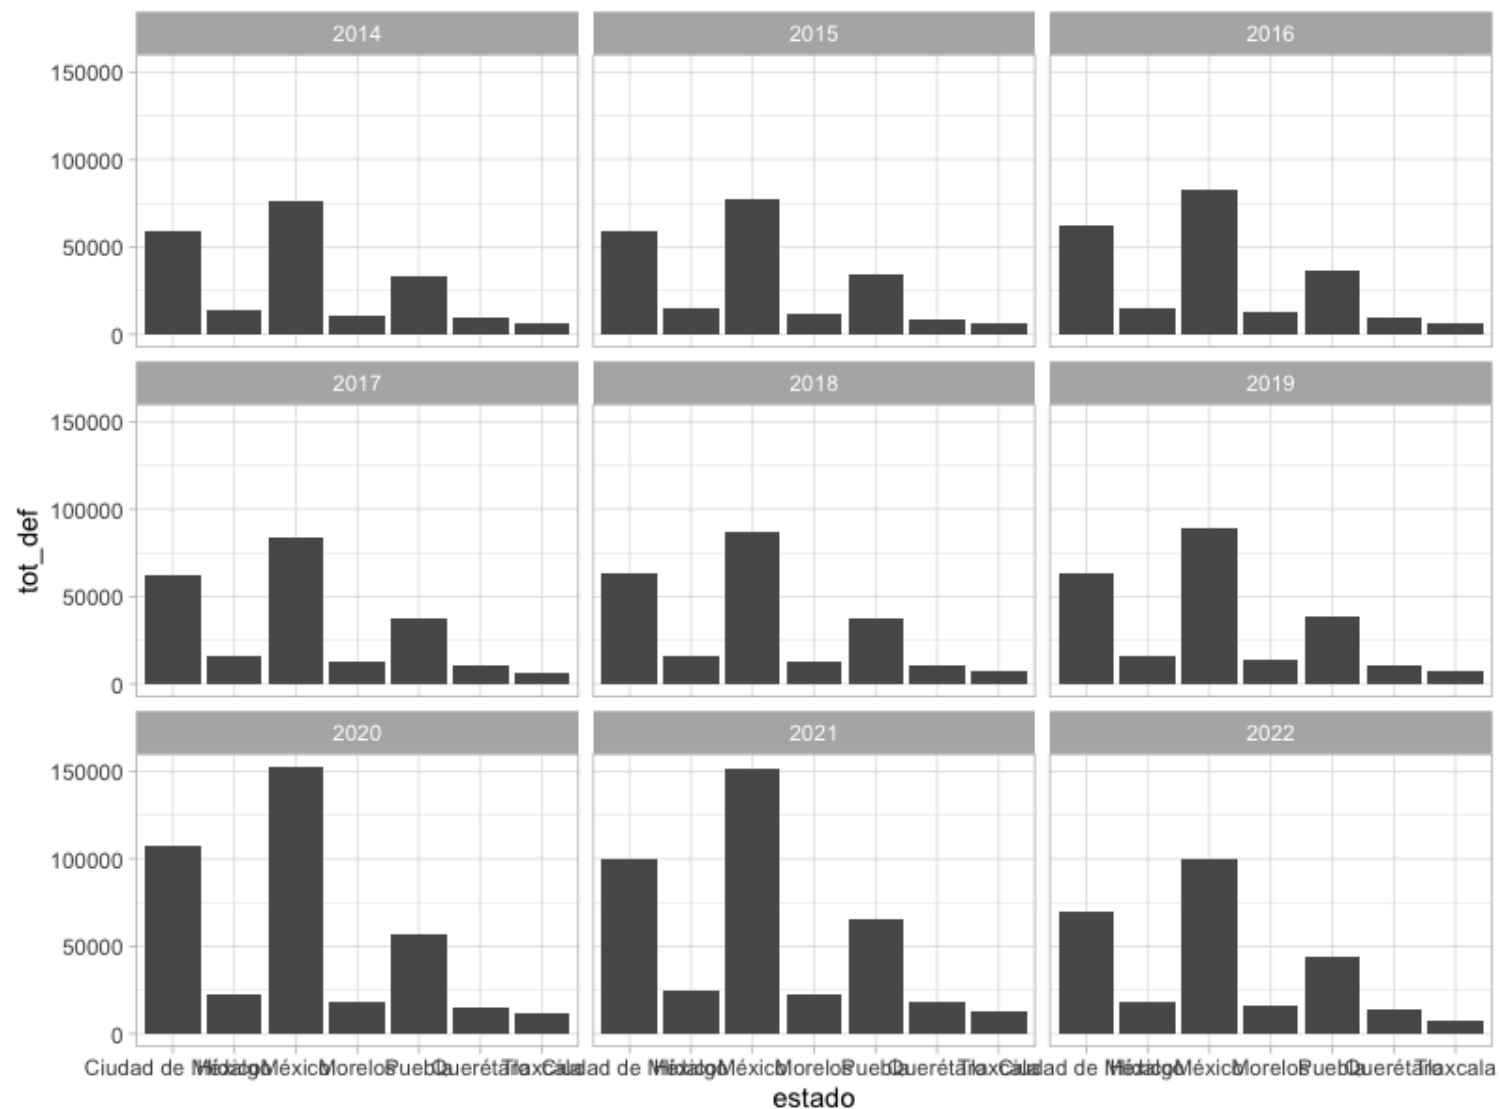

```
ggplot(defun_l) +  
  geom_density(aes(tot_def, color = estado, fill = estado), alpha = 0.15) +  
  theme_bw()
```

```
defun_l %>%
  filter(year_num > 2013) %>%
  ggplot() +
  geom_col(aes(estado, tot_def)) +
  facet_wrap(vars(year_num)) +
  theme_light()
```

Su turno...

- Importe la malla `pm25_zmvm_2019.rds` y guarde el objeto como `pm25_w`.
- Transforme a formato long, guarde el resultado como `pm25_l`.
- Genere un gráfico boxplot.
- Genere un gráfico que muestre la tendencia de la concentración de $PM_{2.5}$ por estación de monitoreo.
- Genere un gráfico que muestre la tendencia de la concentración promedio de $PM_{2.5}$ de todas las estaciones.
