The R Project for Statistical Computing

Getting Started

R is a free software environment for statistical computing and graphics. It compiles and runs on a wide variety of UNIX platforms, Windows and MacOS. To [download R](#), please choose your preferred [CRAN mirror](#).

If you have questions about R like how to download and install the software, or what the license terms are, please read our [answers to frequently asked questions](#) before you send an email.

News

- [Kalibera Family Fund](#) accepts donations until the end of 2026.
- [R version 4.6.1 \(Happy Hop\)](#) has been released on 2026-06-24.
- [R version 4.5.3 \(Reassured Reassurer\)](#) (wrap-up release) was released on 2026-03-11.
- The [useR! 2026](#) conference took place in Warsaw, Poland, July 7-9.
- You can support the R Foundation with a renewable subscription as a [supporting member](#).

The Comprehensive R Archive Network

Download and Install R

Precompiled binary distributions of the base system and contributed packages, **Windows and Mac** users most likely want one of these versions of R:

- [Download R for Linux](#) ([Debian](#), [Fedora/Redhat](#), [Ubuntu](#))
- [Download R for macOS](#)
- [Download R for Windows](#)

R is part of many Linux distributions, you should check with your Linux package management system in addition to the link above.

Source Code for all Platforms

Windows and Mac users most likely want to download the precompiled binaries listed in the upper box, not the source code. The sources have to be compiled before you can use them. If you do not know what this means, you probably do not want to do it!

- The latest release (2026-06-24, Happy Hop) [R-4.6.1.tar.gz](#), read [what's new](#) in the latest version.
- The CRAN directory [src/base-prerelease](#) contains R alpha, beta, and rc releases as daily snapshots in time periods before a planned release.
- Between releases, the same directory [src/base-prerelease](#) contains snapshots of current patched and development versions.
Please read about [new features and bug fixes](#) before filing corresponding feature requests or bug reports.
- Alternatively, daily snapshots are [available here](#).
- Source code of older versions of R is [available here](#).
- Contributed extension [packages](#).

R for macOS

This directory contains binaries for the base distribution and of R and packages to run on macOS. R and package binaries for R versions older than 4.0.0 are only available from the [CRAN archive](#) so users of such versions should adjust the CRAN mirror setting (<https://cran-archive.r-project.org>) accordingly.

Note: Although we take precautions when assembling binaries, please use the normal precautions with downloaded executables.

R 4.6.1 "Happy Hop" released on 2026/06/24

Please check the integrity of the downloaded package by checking the signature:

```
pkgutil --check-signature R-4.6.1-arm64.pkg
```

in the *Terminal* application. If Apple tools are not available you can check the SHA1 checksum of the downloaded image:

```
openssl sha1 R-4.6.1-arm64.pkg
```

Latest release:

For Apple silicon (M1,2,...) Macs: **R 4.6.1** binary for macOS 14 (**Sonoma**) and higher for arm64 Macs, signed and notarized packages.

SHA1-
hash: fc9f4ada15589e8e037b9bf05563d21e97181635
(ca. 101MB, notarized and signed)

[R-4.6.1-arm64.pkg](#)

Contains R 4.6.1 framework, R.app GUI 1.83, Tcl/Tk 8.6.12 X11 libraries and Texinfo 7.3. The latter two components are optional and can be omitted when choosing "custom install", they are only needed if you want to use the `tcltk` R package or build package documentation from sources.

If installing from the *Downloads* folder you must allow the Apple Installer access to that directory. Denying the access will result in you not being able to install any software from there and then you must move the file to a location that is not private such as your home folder.

Note: the use of X11 (including `tcltk`) requires [XQuartz](#) (version 2.8.5 or later). Always re-install XQuartz when upgrading your macOS to a new major version.

This release uses Xcode 26.0 (the same LLVM toolchain up to 26.3) and GNU Fortran 14.2. If you wish to compile R packages which contain Fortran code, you may need to download the corresponding GNU Fortran compiler from <https://mac.R-project.org/tools>. Any external libraries and tools are expected to live in `/opt/R/arm64`.

For older Intel Macs:

[R-4.6.1-x86_64.pkg](#)

SHA1-
hash: 8d3c9e7a71dcba7602aaaf948b574e2e9d29844e
(ca. 104MB, notarized and signed)

R 4.6.1 binary for macOS 11 (**Big Sur**) and higher, signed and notarized packages.

Contains R 4.6.1 framework, R.app GUI 1.83, Tcl/Tk 8.6.12 X11 libraries

Rtools45 for Windows

Rtools is a toolchain bundle used for building R packages from source (those that need compilation of C/C++ or Fortran code) and for building R itself. Rtools45 is currently used for R 4.5 and later, including the development version of R, to become R 4.7.0.

Rtools45 consists of Msys2 build tools, GCC 14/MinGW-w64 compiler toolchain, libraries built using the toolchain, and QPDF. Rtools45 supports 64-bit Windows and UCRT as the C runtime.

Compared to Rtools44, Rtools45 for 64-bit Intel machines has newer versions of two core components: GCC and binutils. It is recommended to re-compile all code with the new toolchain to avoid problems.

Rtools45 is also available for 64-bit ARM machines (aarch64): it includes Msys2 build tools (64-bit Intel builds running via emulation) and aarch64 builds of LLVM 19/MinGW-w64 compiler toolchain, libraries built using the toolchain, and again QPDF. The 64-bit ARM version of Rtools45 is experimental: a number of CRAN packages don't work with it and the Fortran compiler (flang-new) is not yet able to compile Fortran code of all CRAN packages. A number of CRAN packages don't work because they require not-yet-available 64-bit ARM versions of external software.

Installing Rtools45

Rtools is only needed for installation of R packages from source (those that need compilation of C/C++ or Fortran code) or building R from source. R can be installed from the R binary installer and by default will install binary versions of CRAN packages, which does not require Rtools45.

Moreover, online build services are available to check and build R packages for Windows, for which again one does not need to install Rtools45 locally. The [Winbuilder](#) check service uses identical setup as the CRAN incoming packages checks and has already all CRAN and Bioconductor packages pre-installed.

Rtools45 may be installed from the [Rtools45 installer](#) or [64-bit ARM Rtools45 installer](#). It is recommended to use the defaults, including the default installation location of `c:\rtools45`.

When using R installed by the installer, no further setup is necessary after installing Rtools45 to build R packages from source. When using the default installation location, R and Rtools45 may be installed in any order and Rtools45 may be installed when R is already running.

Si usted requiere instalar una versión anterior de **RTools** se le recomienda buscar en Youtube, ahí usted puede encontrar de forma visual todo el proceso para instalarlo.

<https://www.xquartz.org>

Clic para descargar

The XQuartz project is an open-source effort to develop a version of the X.Org X Window System that runs on macOS. Together with supporting libraries and applications, it forms the X11.app that Apple shipped with OS X versions 10.5 through 10.7.

Quick Download

Download	Version	Released	Info
 XQuartz-2.8.5.pkg	2.8.5	2023-01-26	For macOS 10.9 or later

License Info

An XQuartz installation consists of many individual pieces of software which have various licenses. The X.Org software components' licenses are discussed on the X.Org Foundation Licenses page. The quartz-wm window manager included with the XQuartz distribution uses the Apple Public Source License Version 2.

¡Listo!
